DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of Embodiment of Figs. 16 and 17 (claims 1-3) in the reply filed on May 21, 2009 is acknowledged.

Claims 4-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on May 21, 2009.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

There is no adequate description in the elected embodiment of Figs. 16 and 17 for the claims limitation of "a separation region arranged between said first linear body and said second linear body ", as recited in claim 1.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 3 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claimed limitations of "and/or", as recited in Claim 3, are unclear as to which structure is claimed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Takeuchi (US 5,970,351).

Re. claim 1, Fig. 11 (a-c) of Takeuchi discloses a complementary MISFET comprising:

a first linear body including an N-type MISFET (1A) and a second linear body including a P-type MISFET (1B); and
a separation region (2) arranged between said first linear body (1A) and said second linear body (1B).

Re. claim 2, Takeuchi discloses the complementary MISFET of claim 1, wherein each cross section having a plurality of regions (source/drain region) for forming said

MISFET is continuously or intermittently formed in the longitudinal direction (as seen in Fig. 11c).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi.

Re. claim 3, Takeuchi discloses the complementary MISFET of claim 1, wherein said linear bodies and/or said separation region are formed of a material made of an organic semiconductor or electroconductive polymer.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide said linear bodies and/or said separation region are formed of a material made of an organic semiconductor or electroconductive polymer, since it have been held to be within the general skill of a worker in the art to select a know material on the basis of its suitability for the intended use as a matter of obvious design choice.
